

Nr. 21

The Principal Librarian

Sydney 1st June 1951

Dear Sir/Madam,

Please receive

- (1) Letter from Dr. Alexander Wolsky, Principal Scientific Officer of the Unesco Science Co-operation Office for South East Asia, recommending the purchase of the extensive work on SEMANTOGRAPHY, (3 Volumes) by the main libraries of South East Asia.
- (2) Letter from Mr. John Metcalfe, Principal Librarian of the Public Library of New South Wales, Australia, recommending too the purchase and approving the price.
- (3) Brochure No. 6, containing the favourable comment of world-famous scientists, especially Bertrand Russell, who wrote that spending money on this work, means "performing an important Service to Mankind".

Semantography may prove of the greatest importance for the Mankind of South East Asia, who are mostly illiterate and split up in hundreds of languages and dialects, and won't take to official languages, just as even in the United States, millions of people speak almost exclusively French, Italian, Swedish, etc.

Semantography is at the simplest level a Picture Writing, which makes it possible that a government notice, a school book, a paper, a letter can be read and understood in all native languages.

On the higher level, it can be used for detailed communication in
Agriculture, Botany, Zoology,
Medicine, Hygiene, etc.
Technology, Engineering,
Chemistry, and other Sciences

- (4) Please use the Order Form for this important and extensive work.

Yours Sincerely
